SUMMARY

Senior data scientist with PhD-level expertise in quantitative behavioral science. Builds predictive models in Python & BigQuery, runs large-scale A/B tests, and analyzes 100k+ record datasets to drive decisions; led online experiments improving conversions by 20%.

SKILLS

- **Programming Languages:** R, Python, SQL
- **Statistical Analysis:** Statistical & Predictive Modeling, Data Analysis & Visualization
- **Machine Learning:** Regression, Decision Trees, Neural Networks, Model Evaluation
- **Research Methodology:** A/B Testing, Experimental Design

EDUCATION

- **Cornell University** | Doctor of Philosophy (PhD) in Marketing
- **New York University** | Bachelor of Arts in Economics and Psychology

EXPERIENCE

CVS Health

Senior Data Scientist

2025 – Present

- Built preliminary predictive models to predict unmanaged diabetes and forecast end-of-year medication adherence, used to improve member targeting, client interventions, and campaign spending
- Identified 'single-filler' adherence patterns as a key cost-driver, leading an analysis that re-segmented outreach targets and optimized program spend

Cornell University

Quantitative Behavioral Scientist

2018 – 2024

- Analyzed 100k+ records for a grocery start-up, finding a 15% average spend difference by payment method that informed strategy
- Developed & deployed consumer surveys to optimize online product displays, increasing accessory purchases by 20% via partitioned webpages

PROJECTS

Predictive Modeling for Moneyline Sports Betting

- Developed a Neural Collaborative Filtering model to predict profitable moneyline bets, scraping and analyzing historical odds data to identify inefficiencies in bookmaker pricing (achieved a positive ROI of 0.26% after accounting for a 5% bookmaker margin)
